PROFILE

Through my career so far as a Software Developer I have focused on developing scalable, reusable, secure and well-documented code. I enjoy working collaboratively but can also run with projects independently. More than year of hands-on experience utilizing Java and Spring Boot, currently working with React + Spring Boot on freelance project, continuously learning new concepts and skills every day.

WORK EXPERIENCE

Full Stack Developer - Spring Boot + React

Freelance Project on Upwork Platform - Real Estate Platform   07/2023 - present

- I created a couple of features that allow admins to better handle ads for approval, including a description generator for ads with empty descriptions, validator checks for ad fields, and management tools to allow admins better control over ads and handle many ads faster.
- Collaborating with a teammate, we successfully refactored and optimized our search queries for filtering ads, enabling searches by city, type, and various other criteria. Utilizing the performance monitoring tool Apache JMeter, we were able to quantify our improvements, achieving a notable enhancement of 25% in search result responsiveness.
- Resolved several bugs to enhance user experience, resulting in significant improvements to overall usability.

Software Developer

Vega IT - Niš, Serbia   02/22 - 10/22

- Enhanced fintech project functionality by implementing a data export feature enabling users to export data within specified date ranges, complementing existing weekly, monthly, and yearly export options.
- Developed a feature enabling users to select a specific date, upon which they would receive an automated monthly export of their data via Gmail, eliminating the need for manual monthly exports.
- Proficiently documented project implementations and provided clear and concise reports, ensuring transparency and facilitating efficient project management processes.
- Actively engaged in daily team meetings, collaborating closely with colleagues to achieve project objectives and maintain effective communication channels.
